

Since only 1st entry of PGD is full of 0's, there are 512 GB of unmapped virtual memory.

512 GB = $0 \times 800\ 000\ 0000$ and now subtract 1.

$$0x800\ 000\ 0000 - 0x1 = 0x7FF\ FFF\ FFFF$$

Virtual memory is mapped from 0x0000 0000 0000 to 0x007F FFFF FFFF

$$= 0 \times 007F \quad FFFF \quad FFFF$$
